

Independent developers have also released many unofficial apps for reading Wikipedia articles. Some apps load content from the Wikipedia site and process it; other apps use the [MediaWiki API](#). Some only display Wikipedia content, usually omitting some features such as categories and talk pages. Some allow editing.

## iOS

The iOS app also provides a read and write version of Wikipedia,<sup>[6]</sup> similar to the mobile web version. It allows users to share an article via Facebook and other social websites. It also allows users to find geotagged articles near their current location. It does not allow users to see categories or see the normal desktop version.

## Windows

The Metro-style app provides a read-only version of Wikipedia, similar to the mobile web version. The app when used in Windows RT is incapable of showing moving pictures.

## Kiwix

Kiwix has developed a number of offline apps based on Wikipedia content.

## Related apps

A number of apps for Wikipedia's sister projects exist. These include the Wiki Loves Monuments app, written for a 2012 photo contest, as an aid for Wikiphotographers. It shows a map of nearby national heritage register items, indicating whether Wikipedia had a photo for the site, and enabling quick and easy photo uploads for camera phones. It is not integrated with the official article display app.

There is an Android app for Wikimedia Commons which is community maintained (<https://github.com/commons-app/apps-android-commons>), and described on the Commons mobile app page. There is also an Android app for Wiktionary, although it is no longer supported and has not been updated since August 2013.
